Declaration

I Dhruv C. Makwana of Trinity College College, being a candidate for Computer Science Tripos, Part III, hereby declare that this report and the work described in it are my own work, unaided except as may be specified below, and that the report does not contain material that has already been used to any substantial extent for a comparable purpose.

Abstract

This is the abstract. Write a summary of the whole thing. Make sure it fits in one page.

Contents

1	Introduction	7
1.1	Overview of Problem	7
1.2	Contributions	7
2	Background	9
2.1	Tracking Resources with Linearity	9
2.2	Problem in Detail	9
2.3	Proposed Solution	9
3	Implementation	11
3.1	Core Language	11
3.2	Elaboration and Inference	11
3.3	Compiling and Metaprogramming	11
4	Evaluation	13
5	Related Work	15
6	Conclusion	17

List of Figures

List of Tables

1 | Introduction

This is the introduction where you should introduce your work. In general the thing to aim for here is to describe a little bit of the context for your work — why did you do it (motivation), what was the hoped-for outcome (aims) — as well as trying to give a brief overview of what you actually did.

It's often useful to bring forward some "highlights" into this chapter (e.g. some particularly compelling results, or a particularly interesting finding).

It's also traditional to give an outline of the rest of the document, although without care this can appear formulaic and tedious. Your call.

1.1 Overview of Problem

1.2 Contributions

2 | Background

A more extensive coverage of what's required to understand your work. In general you should assume the reader has a good undergraduate degree in computer science, but is not necessarily an expert in the particular area you've been working on. Hence this chapter may need to summarize some "text book" material.

This is not something you'd normally require in an academic paper, and it may not be appropriate for your particular circumstances. Indeed, in some cases it's possible to cover all of the "background" material either in the introduction or at appropriate places in the rest of the dissertation.

2.1 Tracking Resources with Linearity

2.2 Problem in Detail

2.3 Proposed Solution

3 | Implementation

This chapter may be called something else. . . but in general the idea is that you have one (or a few) “meat” chapters which describe the work you did in technical detail.

3.1 Core Language

Here, I will describe the syntax and semantics.

3.2 Elaboration and Inference

3.3 Compiling and Metaprogramming

4 | Evaluation

For any practical projects, you should almost certainly have some kind of evaluation, and it's often useful to separate this out into its own chapter.

5 | Related Work

This chapter covers relevant (and typically, recent) research which you build upon (or improve upon). There are two complementary goals for this chapter:

1. to show that you know and understand the state of the art; and
2. to put your work in context

Ideally you can tackle both together by providing a critique of related work, and describing what is insufficient (and how you do better!)

The related work chapter should usually come either near the front or near the back of the dissertation. The advantage of the former is that you get to build the argument for why your work is important before presenting your solution(s) in later chapters; the advantage of the latter is that don't have to forward reference to your solution too much. The correct choice will depend on what you're writing up, and your own personal preference.

6 | Conclusion

As you might imagine: summarizes the dissertation, and draws any conclusions. Depending on the length of your work, and how well you write, you may not need a summary here.

You will generally want to draw some conclusions, and point to potential future work.
