# 3 Interpretation

#### 3.1 Definitions

Operationally,  $Heap \sqsubseteq Loc \times Permission \times Matrix$  (a multiset), denoted with a  $\sigma$ . Define its interpretation to be  $Loc \rightharpoonup Permission \times Matrix$  with  $\star : Heap \times Heap \rightharpoonup Heap$  as follows:

$$(\varsigma_1 \star \varsigma_2)(l) \equiv \begin{cases} \varsigma_1(l) & \text{if } l \in \text{dom}(\varsigma_1) \land l \notin \text{dom}(\varsigma_2) \\ \varsigma_2(l) & \text{if } l \in \text{dom}(\varsigma_2) \land l \notin \text{dom}(\varsigma_1) \\ (f_1 + f_2, m) & \text{if } (f_1, m) = \varsigma_1(l) \land (f_2, m) = \varsigma_2(l) \land f_1 + f_2 \le 1 \\ \text{undefined} & \text{otherwise} \end{cases}$$

Commutativity and associativity of  $\star$  follows from that of +.  $\varsigma_1 \star \varsigma_2$  is defined if it is for all  $l \in \text{dom}(\varsigma_1) \cup \text{dom}(\varsigma_2)$ . Implicitly denote  $\varsigma \equiv \mathcal{H}[\![\sigma]\!] \equiv \bigstar_{(l,f,m)\in\sigma}[l \mapsto_f m]$ .

The n-fold iteration for the StepsTo relation, is also a relation:

$$\forall n. \ \mathbf{err} \to^n \mathbf{err}$$

$$\forall n. \ \langle \sigma, v \rangle \to^n \langle \sigma, v \rangle$$

$$\langle \sigma, e \rangle \to^0 \langle \sigma, e \rangle$$

$$\langle \sigma, e \rangle \to^{n+1} \langle \sigma'', e'' \rangle \equiv \exists \sigma', e'. \ \langle \sigma, e \rangle \to \langle \sigma', e' \rangle \land \langle \sigma', e' \rangle \to^n \langle \sigma'', e'' \rangle$$

Hence, all bounded iterations end in either an err, a heap-and-expression or a heap-and-value.

### 4.1 Lemmas

**4.1.1** 
$$\forall \sigma_s, \sigma_r, e. \ \varsigma_s \star \varsigma_r \ \mathbf{defined} \ \Rightarrow \forall n. \ \langle \sigma_s, e \rangle \to^n = \langle \sigma_f + \sigma_r, e \rangle \to^n$$

SUFFICES: By induction on n, consider only the cases  $\langle \sigma_s, e \rangle \to \langle \sigma_f, e_f \rangle$  where  $\sigma_s \neq \sigma_f$ .

PROOF SKETCH: Only OP-{FREE, MATRIX, SHARE, UNSHARE\_EQ, GEMM\_MATCH} change the heap: the rest are either parametric in the heap or step to an **err**.

PROVE:  $\langle \sigma_s + \sigma_r, e \rangle \rightarrow \langle \sigma_f + \sigma_r, e_f \rangle$ .

- $\langle 1 \rangle 1$ . CASE: OP\_FREE,  $\sigma_s \equiv \sigma' + \{l \mapsto_1 m\}$ ,  $\sigma_f = \sigma'$ . PROOF: Instantiate OP\_FREE with  $(\sigma' + \sigma_r) + \{l \mapsto_1 m\}$ , valid because  $l \notin \text{dom}(\varsigma_r)$  by  $\varsigma' \star [l \mapsto_1 m] \star \varsigma_r$  defined (assumption).
- $\langle 1 \rangle 2$ . Case: Op\_Matrix Proof: Rule has no requirements on  $\sigma_s$  so will also work with  $\sigma_s + \sigma_r$ .
- $\langle 1 \rangle 3$ . Case: Op\_Share,  $\sigma_s \equiv \sigma' + \{l \mapsto_f m\}$ ,  $\sigma_f = \sigma' + \{l \mapsto_{\frac{1}{2} \cdot f} m\} + \{l \mapsto_{\frac{1}{2} \cdot f} m\}$ . Proof: Union-ing  $\sigma_r$  does not remove  $l \mapsto_f m$ , so that can be split out of  $\sigma_s + \sigma_r$  as before.
- $\langle 1 \rangle 4$ . Case: Op\_Unshare\_Eq,  $\sigma_s \equiv \sigma' + \{l \mapsto_{\frac{1}{2} \cdot f} m\} + \{l \mapsto_{\frac{1}{2} \cdot f} m\}, \ \sigma_f = \sigma' + \{l \mapsto_f m\}.$ 
  - $\langle 2 \rangle 1$ . Union-ing  $\sigma_r$  does not remove  $l \mapsto_{\frac{1}{2} \cdot f} m$ , so that can still be split out of  $\sigma_s + \sigma_r$ .
  - $\langle 2 \rangle 2$ . There may also be other valid splits introduced by  $\sigma_r$ .
  - $\langle 2 \rangle 3$ . However, by assumption of  $\varsigma_s \star \varsigma_r$  defined, any splitting of  $\sigma_s + \sigma_r$  will satisfy  $f \leq 1$ .
- $\langle 1 \rangle$ 5. Case: Op\_Gemm\_Match
  - $\langle 2 \rangle 1$ . By assumption of  $\varsigma_s \star \varsigma_r$  defined, either  $l_1$  (or  $l_2$ , or both) are not in  $\sigma_r$ , or they are and the matrix values they point to are the same.
  - $\langle 2 \rangle 2$ . The permissions (of  $l_1$  and/or  $l_2$ ) may differ, but OP\_GEMM\_MATCH universally quantifies over them and leaves them unchanged, so they are irrelevant.
  - $\langle 2 \rangle 3$ . Only the pointed to matrix value at  $l_3$  changes.
  - $\langle 2 \rangle 4$ . Suffices:  $l_3 \notin \pi_1[\sigma_r]$ .
  - $\langle 2 \rangle 5$ . By assumption of  $\varsigma_s \star \varsigma_r$  defined,  $l_3 \notin \text{dom}(\varsigma_r)$ .
  - $\langle 2 \rangle 6$ . Hence  $l_3 \notin \pi_1[\sigma_r]$ .

#### **4.1.2** $\forall k, t. \ \mathcal{V}_k[\![t]\!] \subseteq \mathcal{C}_k[\![t]\!]$

Follows from definition of  $C_k[\![t]\!]$ ,  $\to^j (\forall n. \langle \sigma, v \rangle \to^n \langle \sigma, v \rangle)$  for arbitrary  $j \leq k$  and 4.1.1.

**4.1.3**  $\forall \delta, \gamma, v. \ \delta(\gamma(v))$  is a value.

By construction,  $\delta$  and  $\gamma$  only map variables to values, and values are closed under substitution.

# **4.1.4** $\forall k, \sigma, \sigma', e, e', t. \ (\varsigma', e') \in \mathcal{C}_k[\![t]\!] \land \langle \sigma, e \rangle \rightarrow \langle \sigma', e' \rangle \Rightarrow (\varsigma, e) \in \mathcal{C}_{k+1}[\![t]\!]$

Assume: arbitrary  $j \leq k+1$ , and  $\sigma_r$  such that  $\varsigma \star \varsigma_r$  defined.

- $\langle 1 \rangle 1$ . Case: j = 0. Clearly  $\sigma_f = \sigma_s + \sigma_r$  and e' = e. Remains to show that if e is a value then  $(\varsigma_s \star \varsigma_r, e) \in \mathcal{V}_k[\![t]\!]$ . This is true vacuously, because by assumption, e is not a value.
- $\langle 1 \rangle 2$ . Case:  $j \geq 1$ . We have  $\langle \sigma, e \rangle \to^j = \langle \sigma', e' \rangle \to^{j-1}$ . Instantiate  $(\varsigma', e') \in \mathcal{C}_k[\![t]\!]$ , with  $j-1 \leq k$  and  $\sigma_r$  to conclude the required conditions.

**4.1.5** 
$$j \leq k \Rightarrow -k \llbracket \cdot \rrbracket \subseteq -i \llbracket \cdot \rrbracket$$

Need to prove for  $\mathcal{V}[]$ , by induction on 4.1.4 for  $\mathcal{C}[]$ .

#### 4.2 Soundness

$$\forall \Theta, \Delta, \Gamma, e, t. \ \Theta; \Delta; \Gamma \vdash e : t \Rightarrow \forall k. \ _k \llbracket \Theta; \Delta; \Gamma \vdash e : t \rrbracket$$

PROOF SKETCH: Induction over the typing judgements.

Assume: 1. Arbitrary  $\Theta, \Delta, \Gamma, e, t$  such that  $\Theta; \Delta; \Gamma \vdash e : t$ .

- 2. Arbitrary  $\theta, k, \delta, \gamma, \sigma$  such that:
  - a.  $dom(\Theta) = dom(\theta)$
  - b.  $(\sigma, \gamma) \in \mathcal{L}_k \llbracket \Gamma \rrbracket \theta$
  - c.  $\delta \in \mathcal{I}_k \llbracket \Delta \rrbracket \theta$ .
- 3. W.l.o.g., all variables are distinct/dom( $\Delta$ ) and dom( $\Gamma$ ) are disjoint.
- 4. And so that over expressions  $\gamma \circ \delta = \delta \circ \gamma$ .
- 5. By construction,  $dom(\Delta) = dom(\delta)$  and  $dom(\Gamma) = dom(\gamma)$ .

PROVE:  $(\sigma, \gamma(\delta(e))) \in \mathcal{C}_k \llbracket \theta(t') \rrbracket$ .

Assume: Arbitrary  $j \leq k$  and  $\sigma_r$ .

Suffices: Show whole expression either reduces to  $\mathbf{err}$  or takes j steps.

 $\langle 1 \rangle 1$ . Case: Ty\_Let.

PROVE: 
$$(\sigma, \gamma(\delta(\mathbf{let} \ x = e \ \mathbf{in} \ e'))) \in \mathcal{C}_k[\![\theta(t')]\!].$$
  
SUFFICES:  $(\sigma, \mathbf{let} \ x = \gamma(\delta(e)) \ \mathbf{in} \ \gamma(\delta(e'))) \in \mathcal{C}_k[\![\theta(t')]\!].$ 

- $\langle 2 \rangle 1$ . By induction,
  - 1.  $\llbracket \Theta; \Delta; \Gamma \vdash e : t \rrbracket$
  - 2.  $\Theta; \Delta; \Gamma', x : t \vdash e' : t'$ .
- $\langle 2 \rangle 2$ . By 2b and induction on  $\Gamma'$ , we know there exist  $\sigma_{e'}$ ,  $(\sigma_e, \gamma_e) \in \mathcal{L}_k[\![\Gamma]\!]$ , such that  $\sigma = \sigma_e \star \sigma_{e'}$ .
- $\langle 2 \rangle 3$ . So, using them,  $\theta, k, \delta$ , and 3 we have  $(\sigma_e, \gamma_e(\delta(e))) \in \mathcal{C}_k \llbracket \theta(t) \rrbracket$ .
- $\langle 2 \rangle 4$ . By 3,  $(\sigma_e, \gamma(\delta(e))) \in \mathcal{C}_k \llbracket \theta(t) \rrbracket$ .
- $\langle 2 \rangle$ 5. By definition of  $\mathcal{C}_k[\cdot]$  and  $\langle 2 \rangle$ 2, we instantiate with j and  $\sigma_r = \sigma_{e'}$  to conclude that  $\langle \sigma, \gamma(\delta(e)) \rangle$  either reduces to **err** or another heap and expression.
- $\langle 2 \rangle 6$ . Case: **err**

??? By OP\_CONTEXT\_ERR and 3, the whole expression reduces to **err** in  $j \leq k$  steps. Since  $j \leq k$  and  $\sigma_r$  (for 4.1.1) are arbitrary,  $(\sigma, \gamma(\delta(\mathbf{let} \ x = e \ \mathbf{in} \ e'))) \in \mathcal{C}_k[\![\theta(t')]\!]$ .

- $\langle 2 \rangle$ 7. Case: j steps to another heap and expression. By Op\_Context and 3, the whole expression does the same.
- $\langle 2 \rangle 8$ . If it is not a value, we are done. ??? If it is  $(\sigma_{ef}, v) \in \mathcal{V}_{k-j}[\![\theta(t)]\!]$  by 4.1.3. SUFFICES:  $(\sigma_{ef} \star \sigma_{e'}, \mathbf{let} \ x = v \mathbf{in} \ \gamma(\delta(e'))) \in \mathcal{C}_{k-j}[\![\theta(t')]\!]$ . SUFFICES: ???  $(\sigma_{ef} \star \sigma_{e'}, \gamma(\delta(e'))[x/v]) \in \mathcal{C}_{k-j-1}[\![\theta(t')]\!]$  by 4.1.4.
- $\langle 2 \rangle 9$ . Define:  $\gamma_{e'}(y) = v$  if y = x and  $\gamma(y)$  if  $y \in \text{dom}(\Gamma')$ . ??? Thus, by 4.1.5,  $(\sigma_{e'}, \gamma_{e'}) \in \mathcal{L}_k \llbracket \Gamma', x : t \rrbracket \theta \subseteq \mathcal{L}_{k-j-1} \llbracket \Gamma', x : t \rrbracket \theta$ .
- $\langle 2 \rangle 10$ . Instantiate 2 of step  $\langle 2 \rangle 1$  with  $\theta, k j 1, \delta, \gamma_{e'}, \sigma_{e'}$  to conclude  $(\sigma_{e'}, \gamma_{e'}(\delta(e'))) \in \mathcal{C}_{k-j-1} \llbracket \theta(t') \rrbracket$ .
- $\langle 2 \rangle$ 11. By 3, we have  $\gamma(\delta(e'))[x/v] = \gamma_{e'}(\delta(e'))$  and by 4.1.1 we conclude  $(\sigma_{ef} \star \sigma_{e'}, \gamma(\delta(e'))[x/v]) \in \mathcal{C}_{k-j-1}\llbracket \theta(t') \rrbracket$
- $\langle 1 \rangle 2$ . Case: Ty\_Pair\_Elim.

PROVE:  $(\sigma, \gamma(\delta(\mathbf{let}(a, b) = e \, \mathbf{in} \, e'))) \in \mathcal{C}_k \llbracket \theta(t') \rrbracket$ .

PROOF: Similar to TY\_LET but with OP\_LET\_PAIR

- $\langle 2 \rangle 1$ . When  $(\sigma_{ef}, v) \in \mathcal{V}_{k-i} \llbracket \theta(t_1) \otimes \theta(t_2) \rrbracket$ , we have  $v = (v_1, v_2)$ .

PROVE:  $(\sigma, \gamma(\delta(\mathbf{let} \mathbf{Many} x = e \mathbf{in} e'))) \in \mathcal{C}_k[\![\theta(t)]\!].$ 

PROOF SKETCH: Similar to TY\_LET, but with the following key differences.

- $\langle 2 \rangle 1$ . When  $(\sigma_{ef}, v) \in \mathcal{V}_{k-j}[\![\theta(!t)]\!]$ , since  $\mathcal{V}_{k-j}[\![\theta(!t)]\!] = \mathcal{V}_{k-j}[\![!\theta(t)]\!]$ , we have  $\sigma_{ef} = \emptyset$  and  $v = \mathbf{Many} \ v'$  for some  $(\emptyset, v') \in \mathcal{V}_{k-j}[\![\theta(t)]\!]$ .
